Room:Convention Hall

Time:May 25 16:15-18:45

Outline of Digital Japan Web system

Takenori Sato^{1*}, Hiroshi, P. Sato¹, Yukiko Tachibana¹, Akira Sasagawa¹

¹GSI of Japan

Digital Japan Web system served by Geospatial Information Authority (GSI) of Japan takes a browsing role on survey results, and anyone can superimpose geospatial information on the background map data. Furthermore, the map data are scrollable and scalable. Now GSI promotes usage of the system for national and local government offices and facilitates usage and distribution of geospatial information, base on the principles of Basic Act on the Advancement of Utilizing Geospatial Information.

On the day, we will explain outline of the system as focusing on the background map data delivered by it.

Keywords: Digital Japan, geospatial information
