## Field science with a polar explorer

Sumito Matoba<sup>1\*</sup>, Tetsuhide Yamasaki<sup>2</sup>

<sup>1</sup>ILTS, Hokkaido Univ., <sup>2</sup>Avangnaq

"Avangnaq" project was established in 2006 in order to investigate natural and living environment in Arctic region with researchers based on experiences of activities in Arctic region of a polar explorer, Tetsuhide Yamasaki. We carried out an observation of "frost flowers" at Resolute, Arctic Canada from January to February in 2011. Several cooperative field investigations with polar explorers and researchers have been carried out at home and abroad. In our presentation, we would like to present our expedition and discuss possibilities of the cooperative activities.

Keywords: Greenland, glaciology, glacier, dog sledge
