In 2010 SHIRATAKI geopark were designated for a Japanese geopark.

There are plenty of geosites covering a story of long geological time periods. A main theme is "Obsidian" (including archeological heritage), and the minor themes are a story of geological history, tectonics, environmental change....

We have been trying to prepare the guidebook to a few model courses. One of the courses is "Shiyubetu River course". We report the process of preparing the guidebook in case of this course.

Keywords: SHIRATAKI geopark, obsidian, guidebook
