We developed a system of Magnetic Field Tracing in Global MHD simulations in order to understand magnetosphere convection. To trace magnetic flux tube, ‘Frozen-in’ needs to hold. We investigated the time revolution of magnetic flux and visualize magnetic diffusion regions. As a result, we find that magnetic diffusion regions change depending on IMF directions. In this lecture, we discuss the application of the magnetic field tracing system to space weather.

Keywords: magnetic field line, frozen-in, magnetosphere convection, space weather
