

What of earthquakes knowledge do we know through The 2011 off the Pacific coast of Tohoku Earthquake ?

Hiroo Nemoto^{1*}

¹Div. of Natural Sci., J.F.Oberlin Univ.

The purpose of this study is to make a proposal on the method of new earthquake education based on new information in order to modify the education of natural disaster prevention through the survey in the disaster-stricken area by the 2011 off the Pacific coast of Tohoku Earthquake in the northern part of Miyagi Prefecture.

For instance, we clarified that BOUSAI ZUKIN, which is roughly safety hoods, and/or disaster-preventive helmets at primary and lower secondary schools, approximately 80 percent of them had not prepared them at all.

In this presentation, we will report the results in detail and clarify remaining problems in order to farther developing the curriculumme for the natural disaster in the subject "RIKA" (Natural Sciences) at schools in future.

Acknowledgements

The author would like to thank many teachers and students of several schools. The authors also are grateful for a GRANT-IN-AID for Scientific Research (C) from the Japanese Society for Promoting Science (JSPS) for providing a part of the financial support of this study (representative: NEMOTO, H.; Grant No.: 23531214).
