¹JAXA

As you know, there are still many obstacles for young scientists to raise their children. These obstacles usually become obvious when their spouse starts to work again after the childcare leave or when their spouse starts NEW job. In addition, these will become a hard-to-solve problem when young scientists, who are usually fixed-time researchers, have to inevitably move to another place. The author will talk about this problem and his own case although his case is fortunately a good case.
