¹International Center for Space Weather Science and Education, Kyushu University

The International Center for Space Weather Science and Education (ICSWSE) of Kyushu University, formerly known as the Space Environment Research Center (SERC), has an extensive array of real-time MAGnetic Data Acquisition System (MAGDAS) all over the world. In order to develop the basic space and geoscience awareness in developing countries, we conduct trainings at ICSWSE for our MAGDAS hosts from Asia and Africa with the support of JSPS Core-to-Core Program. Details of the program and activities will be discussed in this paper.
