In late years various types of disaster prevention maps were made by the local governments. This kind of maps were made in Kota-cho, Aichi where the Fukozu active fault of the Mikawa earthquake appeared, and these maps were made depending on purpose such as disaster prevention, sightseeing, cultural assets, and so on. However, tourist does not know dangerous places or evacuation areas with a tourist map. It is necessary for the tourist to evacuate at the time of the disaster. Then we tried the making of map which geography information, the disaster information put together on a sightseeing map.
