How can we conserve geology?: a classification of geoconservation methods

GRAY, Murray^{1*}

¹Reader Emeritus, Queen Mary, University of London, UK

Geoconservation is carried out by a variety of methods, but these have never been systematically classified or compiled into an organised system. This presentation will seek to do this by proposing a classification involving site management, curation, licencing, supervision, benevolent ownership, restoration, legislation, policy and education. Examples and applications of the methods will be presented.

Keywords: Geoconservation, Legislation, Policy, Planning, Education, Site management
