

Relationship Between Development Of Transportation Or Industry And Geographical Features Or Waters In France

MUKAI, Ryo^{1*} ; MORITA, Takashi¹

¹Graduate School of Engineering & Design , Hosei University

The navigable waters in France is the longest at Europe.

Transportation by water is decreasing due to development of a railway and motorization.

Canals are going along to topography. But railways and road routes are not. They are going to destination in a straight line.

Vineyard was developd along to topography, too.

Keywords: canal, transport, topography.
