Critical level blocking diagram 再考 A revisit to critical level blocking diagram

富川 喜弘 ^{1*} TOMIKAWA, Yoshihiro^{1*}

¹ 国立極地研究所,² 総合研究大学院大学 ¹National Institute of Polar Research, ²SOKENDAI

Matsuda et al. (2014) have proposed a new method to obtain a power spectral distribution of gravity waves in a horizontal phase velocity domain from airglow observations. The obtained power spectral distribution can be interpreted as a product of gravity wave source spectrum and wave transmissivity distributions under an assumption without wave dissipation/reflection and wave horizontal propagation. The gravity wave transmissivity depends on the existence of a critical level for the wave, which is determined by background horizontal wind distributions. Taylor et al. (1993) have proposed a critical level blocking diagram which represents a gravity wave transmissivity in a horizontal phase velocity domain. In this talk, the critical level blocking diagram proposed by Taylor et al. (1993) will be revisited, and its amendment will be discussed. In addition, examples of the critical level blocking diagram in some given background horizontal wind distributions will be shown.
