

Report on the earth science education program specializing activities for elementary and lower middle school students

*Norihito Kawamura¹

1. Faculty of Education and Human Studies, Akita University

The author had developed a half-year science education program for lower middle school students, which had experiments and observations especially focusing on geoscience. The class had not only basic but also advanced physics, chemistry, biology and geoscience so that the students could get scientific conceptions related to geoscience.

Keywords: earth science education, lower middle school student, science class focusing on experiments and observations
