S-wave velocity structure of Oita prefecture is checked using H/V and R/V spectral ratio analyzed with strong motion data observed with strong motion network operated by Oita Prefecture. See detail in our Japanese abstract.

Acknowledgement: This research has been done under the Comprehensive Research on the Beppu-Haneyama Fault Zone (FY 2014-2016) by MEXT, Japan. Strong motion data are provided by Oita Prefecture and NIED.

Keywords: H/V spectral ratio, R/V spectral ratio, three-dimensional velocity structure model
